

Update

Faculty in Academe

This report reviews the current characteristics of faculty members in higher education institutions compared to those 20 years ago. This time period is long enough to mark changes in the number of part-time faculty members and the increasing presence of women and minorities in the teaching ranks.

The National Center for Education Statistics (NCES), *Fall Staff in Postsecondary Institutions, 1995* report is the basis for this analysis. Colleges and universities reported on the numbers of employees for the fall of 1995. This report discusses the composition of higher education faculty and compares it to that of 1976. These data represent the most current and only comprehensive data source on the number of full- and part-time faculty members in higher education institutions.

OVERVIEW

As full-time equivalent (FTE) enrollment increased 25 percent over the past 20

Table 1

Number of faculty members, according to employment status and full-time new hires in higher education institutions in 1976 and 1995

	1976	1995	Change from 1976 to 1995
Total faculty	633,210	931,706	47%
Part-time faculty	199,139	380,884	91%
Full-time faculty	434,071	550,822	27%
Full-time new hires	37,302	30,785	-17%

SOURCE: U.S. Department of Education, National Center for Education Statistics. E.D. TABS: *Fall Staff in Postsecondary Institutions, 1995*, NCES 98-228, by Stephen Roey and Rebecca Rak. Project Officers, Rosa Fernandez and Sam Barbett (Washington, D.C.: 1998), pp. B-5, B-6.

years, the number of faculty members in higher education increased 47 percent.¹ However, the magnitude of change over the two decades of part- and full-time faculty members was dramatically different. Part-time faculty almost doubled from 1976 to 1995, increasing 91 percent, while full-time faculty increased only 27 percent (see Table 1). This raises questions of equity and quality. Part-time faculty members are paid less than those who teach full-time, too often are unavailable to students outside of class, and have little access to professional development.

The number of full-time newly hired faculty decreased by 17 percent over the 20-year period.² This, along with the large increase in the number of part-time faculty members, suggests institutions have replaced full-time positions with part-time. The majority of full-time new hires in the fall 1995 were not tenure-track appointments (51%).

UTILIZATION OF PART-TIME FACULTY MEMBERS

The utilization of part-time faculty members differed by institutional sector: 41 per-

cent of the public college and university faculty members were part-time in 1995, compared to 39 percent of those in private, not-for-profit institutions.² Two-year colleges were the largest employer of part-time faculty members. Sixty-four percent of the faculty members worked part-time, compared to 31 percent of those in 4-year institutions (see Table 2).

GENDER

The majority of the increase in the number of faculty members can be attributed to an increasing number of women teaching in academe. The number of women faculty members more than doubled from 172,657 in 1976 to 368,813 in 1995, a 114 percent increase (Table 3). The number of male faculty members increased 22 percent over the same time period, 460,553 in 1976 to 562,893 in 1995. Further, the number of women faculty teaching on a part-time basis almost tripled over the two decades, increasing from 65,410 in 1976 to 178,141 in 1995. The number of men teaching on a part-time basis over the same time period increased by 52 percent, from 133,729 to 202,743.

While women comprised 24 percent of the newly hired full-time faculty in 1976, they were 45 percent of the

new hires in 1995. The number of newly hired full-time female faculty members increased by 55 percent over the 20 years, while the number of newly hired men decreased 40 percent.

The large increase in the number of women faculty members and the moderate increase in men caused a distributional change in the proportions of men and women faculty members. The portion of faculty mem-

Figure 1

Percentage distribution of faculty members by gender and employment status, 1976 and 1995

SOURCE: U.S. Department of Education, National Center for Education Statistics. E.D. TABS: *Fall Staff in Postsecondary Institutions, 1995*, NCES 98-228, by Stephen Roey and Rebecca Rak. Project Officers, Rosa Fernandez and Sam Barbett (Washington, D.C.: 1998), p. 1-7.

bers that were female (summing the part- and full-time women faculty members) increased from 27 to 39 percent from 1976 to 1995; this was a 12 percent change (Figure 1). However, the portion of faculty members that were women teaching full-time only increased 3 percent, from 17 to 20 percent. The result was a distribution change mainly seen in proportional changes in women teaching part-time and men teaching full-time. The portion of faculty members that were male teaching full-time declined 13 percent over the 20 years.

On average, about one-half, 48 percent, of women faculty members worked on a part-

time basis in 1995. This compares to about one-third, 36 percent, of men faculty members working on a part-time basis. Although public 4-year institutions utilized women as full-time faculty more than the average, the 68 percent of women who worked full-time in public 4-year institutions was smaller than that of men — 80 percent. Full-time women faculty members comprised a smaller portion than men in private, 4-year institutions where 55 percent of women compared to 65 percent of men worked full-time.

RACE/ETHNICITY

Since 1975, all minorities increased their share of full-

time faculty positions. Overall, minorities comprised 8.3 percent of full-time faculty members in 1975 and 13.8 percent in 1995 (Table 4). Asian/Pacific Islander faculty members had the largest increase over the 20-year period, from 2.2 to 6.0 percent. The portion of Black, non-Hispanic faculty members increased from 4.4 to 5.0 percent and Hispanic increased from 1.4 to 2.4 percent. American Indian/Alaskan Native faculty members accounted for only 0.4 percent of all faculty members in 1995, up from 0.2 percent in 1975. The resulting share of white, non-Hispanic faculty members decreased from

91.7 percent in 1975 to 86.3 percent in 1995.

TENURE

In 1995, 52 percent of the full-time faculty members were tenured, and 20 percent were on tenure track (Table 5). More white, non-Hispanic faculty members were tenured than faculty members of any other race/ethnicity: 54 percent of white, non-Hispanics were tenured compared to 40 to 46 percent of minority faculty members. However, a larger portion of the minority faculty members were on tenure track in 1995 than white, non-Hispanic faculty members, 25 to 28 percent for minorities compared to 19 percent for white, non-Hispanic faculty members. Further, the portion of new minority faculty members hired on tenured track was greater than that of non-minorities in 1995 — 46 and 47 percent compared to 43 percent.

Fifty-nine percent of male faculty members were tenured compared to 39 percent of female; however, 18 percent of men and 25 percent of women were on tenure track. This represents the rising tide of newly hired women.

As higher proportions of women and minorities advance on the tenure track, the proportions of women

Table 4

Percentage distribution of full-time faculty in institutions of higher education by race/ethnicity in 1975 and 1995

	1975	1995
Total (number)	435,000*	550,822

and minority tenured faculty members may converge with men and non-minority faculty members in the future.

FACULTY MEMBERS BY RANK

Twenty-nine percent of full-time faculty members were professors in 1995 (Table 6). By race, a larger portion of white, non-Hispanics and Asian/Pacific Islanders were professors than those of other races. At the associate level, with the exception of American Indians and those of other race/ethnicity, the portion of faculty members by race/ethnicity was only slightly dispersed from the average of 23 percent.

The rank of professor had

the highest percentage for men, 36 percent, while 15 percent of women were professors. The highest percentage of women was at the assistant level, 30 percent. Further, twice as many women as men held instructor positions, 18 compared to 9 percent. Again, this may reflect the shifting age demographics between men and women in the profession.

CONCLUSION

Over the past 20 years, the number of faculty members increased by almost 50 percent; however, the number of part-time faculty members nearly doubled while the number of full-time faculty members increased by about one-quarter. This re-

flects a long-term trend in hiring. In part it represents a cost saving strategy by colleges and universities. This trend also occurred when more students were enrolling part-time.

The new faculty is slowly decreasing the dominance of white males in faculty positions. The majority white, non-Hispanic and male members continue to dominate the statistics. However, the number of women teaching in academe increased dramatically over the two decades, but women are more likely to be hired in part-time or temporary full-time positions. More women and minorities were in tenure track positions than white, non-
