How to be the greatest teacher I believe to be a great teacher you have to set a good example, create a safe learning environment, and a strong teacher-student relationship with children. I will be using teaching strategies from the Waldorf Education Program, Maria Montessori, and Lev Vygotsky. The reason why I choose Lev Vygotsky was because I liked his theory of the Zone of Proximal Development, which is a well-known theory in childhood education. Maria Montessori created the work task concept, which is when teachers give instructions to their students. The way to keep the balance and good education is for the body, mind, and spirit to come together. The main concept that Vygotsky came up with, was the zone of proximal development, which is a gap between the child’s independent work and that which he/she can do with the help of an adult. Teachers use scaffolding to help the students learn what they don’t know. Teachers also need to be supporting and be there for the students because children have a tough time when it comes to learning when they don’t know something. Vygotsky referred to Z.P.D as the sweet spot where learning is beneficial.
