Outline for Presentation on Artificial Intelligence for Senior Citizens

Understanding Artificial Intelligence: A Beginner's Guide

Thomas Nedreberg:

President, Utah Education Association – Retired. Thomas retired after 43 years in education. He started as a 4th-grade teacher in Mesa, AZ, then moved to Ticaboo/Bullfrog, UT, where he taught a combined 4-6 grade class, he then moved to Eureka, UT in the Tintic School District, where he taught 6th grade, became a head teacher, principal at the elementary level, spent one year as principal at the high school, returned as an elementary principal, became District Title 1 director, Special Education Director and spent the last seventeen years as the Technology Director. Since he was in a small district, he also continued to teach half-time grades 7 and 8, science, math, Utah History, Technology, and Art. He was Vice President of UEA for six years and worked as a UniServ Director for six years, advocating for ten districts in Central and Southeastern Utah. Served on the board of UCET (UT Council for Educational Technology) and TCC (Technology Coordinators Council).

Jay Blain:

Utah Education Association UniServ Coordinator and Bargaining Director. He has been the Director of Policy and Research for 15 yrs where his responsibility was supporting negotiations across the state with our locals and lobbying the state legislature primarily in the areas of school finance and tax policy. He was also a Granite School District Math Teacher for over 20 years and Adjunct Instructor for Salt Lake Community College for 14 years, teaching Mathematics and Computer Science. Jay was on the board and served as President of UCET (UT Council for Educational Technology

Executive Summary

This document provides a comprehensive overview of Artificial Intelligence (AI) and its applications, particularly focusing on how AI can benefit senior citizens. It covers the definition and history of AI, debunks common misconceptions, and highlights various ways AI is used today, such as virtual assistants, healthcare, recommendation systems, safety and security, transportation, communication, and daily assistance. The document also discusses AI's role in financial services, including personalized financial advice, fraud detection, budgeting, investment management, automated bill payments, and voice-activated banking. Additionally, it outlines the benefits of AI, such as improved efficiency, enhanced decision-making, personalized experiences, and improved quality of life, while addressing challenges and concerns like ethical considerations, privacy and security issues, impact on employment, and AI bias. The future of AI is explored through emerging trends and potential applications, and the document lists current AI programs in writing, photo editing, music creation, and education.

Introduction

- Welcome and Introduction
 - Hello everyone, and welcome to our presentation on Artificial Intelligence (AI). Today, we will explore the fascinating world of AI, a technology transforming our lives in many ways.
- Purpose of the Presentation
 - This presentation aims to provide a clear understanding of AI, how it works, and how it impacts our daily lives. We aim to demystify AI and show that it is not as complex or intimidating as it may seem.

What is Artificial Intelligence (AI)?

- Definition of Artificial Intelligence
 - Artificial Intelligence (AI) is a branch of computer science that focuses on creating systems capable of performing tasks that typically require human intelligence. These tasks include learning from experience, understanding natural language, recognizing patterns, solving problems, and making decisions. AI systems can be found in various applications, such as virtual assistants, recommendation systems, healthcare diagnostics, and financial services.
- Brief History of AI
 - The concept of AI dates back to ancient times, with myths and stories about artificial beings endowed with intelligence. However, the formal field of AI research was founded in 1956 at a conference at Dartmouth College. Early AI research focused on problem-solving and symbolic methods. In the 1960s and 1970s, AI saw significant advancements with the development of expert systems, which were designed to mimic human decision-making.
 - The 1980s brought about the rise of machine learning, where computers were trained to learn from data. This period also saw the development of neural networks, which are designed to simulate the way the human brain works. The 1990s and 2000s witnessed the advent of more sophisticated algorithms and the availability of large datasets, leading to significant improvements in AI capabilities.
 - In recent years, AI has made remarkable strides with the advent of deep learning, a subset of machine learning that uses neural networks with many layers. This has enabled breakthroughs in areas such as image and speech recognition, natural language processing, and autonomous systems. Today, AI is an integral part of many industries, including healthcare, finance, and transportation.
- Common Misconceptions about AI
 - Al is Only for the Young and Tech-Savvy: Many seniors might believe that Al is too complex and only accessible to younger, tech-savvy individuals. However, Al is designed to be user-friendly and can greatly benefit people of all ages.

- **Al Will Replace Human Jobs**: While Al can automate certain tasks, it is more about augmenting human capabilities rather than replacing jobs. Al can take over repetitive tasks, allowing humans to focus on more creative and meaningful work.
- **Al is Dangerous and Unpredictable**: Some may fear that Al systems are uncontrollable and could pose a threat. In reality, Al systems are designed with safety protocols and ethical guidelines to ensure they operate within set boundaries.
- **AI Lacks Human Touch**: There is a misconception that AI cannot provide personalized or empathetic interactions. However, AI can be programmed to understand and respond to human emotions, providing a more personalized experience.
- Al is a New and Unproven Technology: Al has been in development for decades and is already integrated into many aspects of daily life, such as virtual assistants, healthcare diagnostics, and financial services.
- Al Requires Constant Internet Connection: While some AI applications do require internet connectivity, many AI systems can function offline once they have been set up.

How AI is Used Today

- AI in Everyday Life: AI is designed to be user-friendly and can greatly benefit people of all ages, including seniors. By integrating AI into their daily routines, senior citizens can enjoy a more convenient, safe, and connected lifestyle.
- Examples of AI Applications (e.g., virtual assistants, recommendation systems): AIpowered virtual assistants like Siri, Alexa, and Google Assistant can help seniors with tasks such as setting reminders, making calls, sending messages, and providing information on various topics.
- AI in Healthcare: AI can assist in healthcare by providing reminders for medication, monitoring health conditions, and even predicting potential health issues. AI systems can also help in scheduling appointments and providing telemedicine services.
- **Recommendation Systems:** AI can offer personalized recommendations for entertainment, such as movies, music, and books, based on the user's preferences.
- Safety and Security: AI-powered home security systems can monitor the home, detect unusual activities, and alert the user or emergency services if needed1.

- **Transportation:** AI can assist with transportation needs by providing real-time traffic updates, suggesting the best routes, and even offering ride-sharing services.
- **Communication**: AI can help seniors stay connected with family and friends through voice-activated devices and applications that facilitate video calls and messaging.
- **Daily Assistance:** AI can help with daily tasks such as grocery shopping, meal planning, and managing household chores through smart home devices 1.
- AI in Financial Services:
 - **Personalized Financial Advice**: AI can provide personalized financial advice based on an individual's spending habits, income, and financial goals. This can help seniors make informed decisions about their finances.
 - **Fraud Detection**: AI systems can monitor financial transactions in real time and detect any unusual or potentially fraudulent activities. This can help protect seniors from financial scams and fraud1.
 - **Budgeting and Expense Tracking**: AI-powered apps can help seniors track their expenses, create budgets, and manage their finances more effectively. These apps can provide insights into spending patterns and suggest ways to save money.
 - **Investment Management**: AI can assist in managing investments by analyzing market trends and providing recommendations on where to invest. This can help seniors grow their savings and achieve their financial goals.
 - Automated Bill Payments: AI can automate the process of paying bills, ensuring that seniors never miss a payment. This can help avoid late fees and maintain a good credit score.
 - **Voice-Activated Banking**: AI-powered voice assistants can help seniors perform banking tasks using voice commands. This can make it easier for seniors to check their account balances, transfer money, and perform other banking activities without needing to navigate complex interfaces.

Benefits of Al

- **Improved Efficiency and Productivity:** AI can automate repetitive and time-consuming tasks, allowing individuals and businesses to focus on more strategic and creative activities. This leads to increased productivity and efficiency in various processes.
- Enhanced Decision-Making: AI systems can analyze vast amounts of data quickly and accurately, providing valuable insights and recommendations. This helps in making informed decisions faster and more effectively.
- **Personalized Experiences:** AI can tailor experiences based on individual preferences and behaviors. This personalization can enhance customer satisfaction and engagement, leading to better outcomes.

• **Improving Quality of Life:** By automating mundane tasks and providing intelligent assistance, AI can improve the overall quality of life. This is particularly beneficial for seniors and individuals with disabilities4.

Challenges and Concerns

- **Ethical Considerations**: The development and deployment of AI systems raise ethical questions, such as the potential for misuse, the impact on human autonomy, and the need for transparency and accountability.
- **Privacy and Security Issues**: AI systems often require access to large amounts of personal data, which can lead to concerns about data privacy and security. Ensuring that this data is protected and used responsibly is crucial2.
- **Impact on Employment and the Job Market**: AI has the potential to automate many tasks, which could lead to job displacement and changes in the job market. It is important to consider how to support workers who may be affected by these changes.
- AI Bias and Fairness: AI systems can sometimes exhibit biases based on the data they are trained on. Ensuring that AI systems are fair and do not perpetuate existing biases is a significant challenge.

The Future of Al

- Emerging Trends in AI and Potential Future Applications:
 - **Explainable AI (XAI)**: This trend focuses on making AI systems more transparent and understandable to humans. It aims to provide clear explanations of how AI models make decisions, which is crucial for building trust and ensuring accountability1.
 - AI in Healthcare: AI is increasingly being used in healthcare for tasks such as diagnosing diseases, predicting patient outcomes, and personalizing treatment plans. This trend is expected to grow as AI technology continues to advance1.
 - AI and Edge Computing: Combining AI with edge computing allows data processing to occur closer to the source of data generation. This reduces latency and improves the efficiency of AI applications, particularly in IoT devices1.
 - AI for Sustainability: AI is being leveraged to address environmental challenges, such as optimizing energy usage, predicting natural disasters, and improving resource management. This trend highlights the potential of AI to contribute to a more sustainable future1.
 - AI in Education: AI is being integrated into educational tools to provide personalized learning experiences, automate administrative tasks, and support teachers in delivering more effective instruction1.

• AI and the Aging Population: AI can play a significant role in supporting the aging population by providing personalized healthcare, monitoring health conditions, and assisting with daily tasks. This can help seniors maintain their independence and improve their quality of life1.

Some Current Writing Artificial Intelligence Programs

1. Microsoft Copilot:

- **Integration**: Copilot is integrated into Microsoft 365 applications like Word, Excel, and Outlook, making it a powerful tool for enhancing productivity within these platforms.
- **Capabilities**: It leverages GPT-4 to assist with tasks such as drafting emails, generating reports, and providing data insights.
- Accessibility: Available to Microsoft 365 subscribers, making it easily accessible for users within the Microsoft ecosystem.

2. Google Gemini:

- Integration: Gemini is integrated into Google's ecosystem, including Google Workspace and Android devices.
- **Capabilities**: It excels in providing quick and accurate responses, generating text, and offering image support.
- Unique Features: Gemini has a "Double-check response" feature that allows users to verify its responses from the internet.

3. ChatGPT:

- **Integration**: ChatGPT is available as a standalone application and can be integrated into various platforms through APIs.
- **Capabilities**: It is highly versatile, excelling in creative writing, brainstorming, answering questions, and providing explanations on various topics.
- Accessibility: OpenAI offers free access to ChatGPT with GPT-3.5 and GPT-40 models, with a paid Plus version for additional features.

Current AI Photo Programs

- 1. Adobe Photoshop AI: Adobe Photoshop is long regarded as the industry standard for photo editing. Now, it integrates advanced AI tools that elevate the editing experience for photographers.
- 2. Adobe Firefly: Adobe's generative AI photo editor, Firefly, redefines creative possibilities for photographers.
- 3. Luminar Neo: This AI-powered photo editor offers tools for enhancing images, such as sky replacement and facial recognition.
- 4. **Corel Paintshop Pro**: Known for its comprehensive photo editing features, Corel Paintshop Pro now includes AI tools for tasks like noise reduction and image enhancement.
- 5. **Pixlr**: A free online photo editor that uses AI to simplify complex editing tasks1.

- 6. **Canva AI**: Canva integrates AI tools for photo editing, making it easy to enhance images and create designs.
- 7. **PhotoDirector**: This comprehensive tool offers a blend of professional features and intuitive design, suitable for both amateurs and experts. It includes AI tools like object removal, sky replacement, and facial recognition.
- 8. **MyEdit**: An online AI photo editor that is simple, fast, and accurate, packed with tools for generating new content or enhancing photos.
- 9. **Promeo**: Ideal for marketing, this AI photo editor helps generate custom ads or ecommerce templates using AI.

These AI photo programs are designed to make photo editing more accessible and efficient, catering to both professional photographers and hobbyists.

Current Al Music Creation Programs

- 1. LANDR Mastering: This AI-driven online mastering tool has revolutionized the music production process. It customizes a mastering chain unique to every track, ensuring the best possible sound quality. Trusted by Grammy Award winners and over 5 million musicians globally, LANDR simplifies the mastering process, making it accessible to producers of all levels.
- 2. Vocal Remover and Isolation by Vocalremover.org: This free, AI-powered tool allows users to separate vocals from instrumentals in any song. It's particularly useful for creating karaoke tracks or isolating acapellas for remixing.
- 3. **Samplab**: This cutting-edge AI-powered software allows music producers to edit polyphonic audio as easily as editing MIDI files. It offers tools for note editing, chord detection, and stem separation, making it a versatile addition to any producer's toolkit.
- 4. **SoundCloud AI Tools**: SoundCloud has launched several AI-powered tools for enhancing music, including mixing, remixing, beat making, and vocals.
- 5. **Apple's Logic Pro**: This popular software includes AI-driven features to streamline workflows, enabling artists to focus more on their creative vision.

These AI programs are designed to enhance creativity and streamline the music production process, making it easier for both amateur and professional musicians to create high-quality music.

What AI Programs are being used in Education

- 1. **DreamBox**: This platform tailors educational content to each student's unique learning style and pace, analyzing student responses in real time to adapt lessons dynamically.
- 2. Smart Sparrow: Similar to DreamBox, Smart Sparrow provides adaptive learning experiences, enabling students to master concepts at their own speed.
- 3. **Gradescope**: This tool automates grading, providing consistent and objective evaluation of assignments.

- 4. **Kahoot!**: An interactive platform that uses AI to create quizzes and simulations, making learning more engaging.
- 5. **Minecraft: Education Edition**: This program uses AI to create interactive learning experiences, keeping students motivated and involved.
- 6. Notta: A speech recognition software that transcribes spoken words into text, supporting hearing-impaired students.
- 7. **Squirrel Ai**: A hybrid education company offering a large adaptive model learning system that has improved student question accuracy rates through personalized learning paths.
- 8. **UNICEF's Accessible Digital Textbooks**: This initiative employs AI to develop digital tools that support diverse learning needs, particularly benefiting students with disabilities.
- 9. Letrus Programme in Brazil: Uses AI-driven feedback mechanisms to significantly improve literacy skills across socioeconomic statuses in hundreds of schools.

These AI programs are designed to enhance personalized learning, streamline administrative tasks, and provide more effective support to students, making education more inclusive and effective.

Q&A Session

- Open Floor for Questions from the Audience
- Discussion of Specific Concerns or Interests

Conclusion

- Recap of Key Points
- Encouragement to Explore More about AI
- Thank You and Closing Remarks

Using Artificial Intelligence Absolute Beginner's Guide 1st Edition by <u>Michael Miller</u> (Author)

Using Artificial Intelligence Absolute Beginner's Guide will have you getting the most of popular AI tools in no time! Here's a small sample of what you'll find inside:

- Learn how AI can make everyday life easier.
- Get tips for using AI to write, gather information, get advice, and more.
- Discover how to use AI to generate images that are realistic and fantastical!
- Examine the risks and rewards of artificial intelligence.
- Find step-by-step instructions for today's most popular AI tools, including ChatGPT, Google Gemini, Meta AI, Microsoft Copilot, and Midjourney.

• Find out how to tell when something is AI generated so you don't get fooled by deepfakes.

Artificial intelligence can be fun and productive if you know which tools to use and when. *Using Artificial Intelligence Absolute Beginner's Guide* tells you all about today's major AI tools and shows how to get the best results from them. You'll learn to use AI for turning your ideas into art, writing a great email, sharpening your resume, and even sparking conversation. Instantly research everything from planning a trip to making your next big purchase. It's all a matter of picking the right AI tool and constructing the right prompt. You'll also learn to protect yourself from the risks of AI and distinguish AI fakes from the real thing. Everything you need to know is here in this book!

The Innovators: How a Group of Hackers, Geniuses, and Geeks Created the Digital Revolution by <u>Walter Isaacson</u> (Author)

The Innovators is a "riveting, propulsive, and at times deeply moving" (*The Atlantic*) story of the people who created the computer and the internet.

What were the talents that allowed certain inventors and entrepreneurs to turn their visionary ideas into disruptive realities? What led to their creative leaps? Why did some succeed and others fail?

The Innovators is a masterly saga of collaborative genius destined to be the standard history of the digital revolution—and an indispensable guide to how innovation really happens. Isaacson begins the adventure with Ada Lovelace, Lord Byron's daughter, who pioneered computer programming in the 1840s. He explores the fascinating personalities that created our current digital revolution, such as Vannevar Bush, Alan Turing, John von Neumann, J.C.R. Licklider, Doug Engelbart, Robert Noyce, Bill Gates, Steve Wozniak, Steve Jobs, Tim Berners-Lee, and Larry Page.

This is the story of how their minds worked and what made them so inventive. It's also a narrative of how their ability to collaborate and master the art of teamwork made them even more creative. For an era that seeks to foster innovation, creativity, and teamwork, *The Innovators* is "a sweeping and surprisingly tenderhearted history of the digital age" (*The New York Times*).

How AI is Impacting the Future of Work Among Adults Age 50-Plus

By Lona Choi-Allum, AARP Research

Published August 07, 2024

Advancements in artificial intelligence (AI) have sparked curiosity and concern across all age groups, including older adults. In this survey, fielded among adults age 50-plus, we delve into the uses and perceptions of AI in the workplace.

As older adults increasingly encounter AI-driven technologies in their daily lives, it's important that we explore the challenges and opportunities associated with AI among this demographic, including shedding light on how technology can enhance the future of work.

Older workers want to learn more about AI.

Although very few workers (7%) say they have taken training or education classes on using AI in their line of work, nearly half (48%) say they are interested in doing so.

Not surprising given that knowledge of and familiarity with AI is limited.

Among adults age 50-plus, over two in five (42%) say they are knowledgeable about AI. And, when it comes to familiarity with the use of AI in the workplace, only three in 10 (31%) say they are very or somewhat familiar.

Finding information is the top use of AI among older workers.

Among those currently working, only one in seven (14%) say they use AI to a great or some extent, while the vast majority (80%) describe their use as not too much or not at all.

The top uses of AI among older workers include finding information (48%), analyzing data or information (28%), and creating content (text, images, audio, videos) (25%). The least common uses include performing physical activities (5%), managing social media engagements (5%), and managing the hiring process (4%).

The impact of AI on the future of work is seen as both a threat and an opportunity.

A third of older adults (33%) see AI as both a threat and an opportunity today — with one in five saying it is a threat (22%) and about one in five seeing it as an opportunity (20%). The most commonly identified opportunities are to enhance productivity in the workplace (36%), as well as to speed up decision-making processes (30%) and to make work easier (30%). Nearly half (48%) say that AI will automate repetitive tasks which could be seen as both an opportunity and a threat depending on a worker's role in their line of work.

The primary threat identified by a majority of older adults pertains to workplace disruption: replacing (61%) or displacing (57%) workers. Older workers are not alone in this concern. A <u>recent study</u> by the American Psychological Association found that younger workers (age 18–57) are more worried than workers age 58-plus that AI may make some or all job duties obsolete.

Given that a sizeable portion of older adults (30%) say they don't know whether AI is a threat or an opportunity in the workplace, more education is needed on how it can impact the future of work.

Methodology

Interviews were conducted in two waves: April 11–16, 2024 and May 16–28, 2024 among 2,031 U.S. adults age 50-plus in the Foresight 50+ Omnibus. This sample included 919 adults in the labor force (working full-time, part-time, self-employed, or not working but looking for work) and 1,106 adults not in the labor force (not working – retired, disabled, or other reason). Funded and operated by NORC at the University of Chicago, Foresight 50+ by AARP and NORC is a probability-based panel designed to be representative of the U.S. household population age 50 or older. Interviews were conducted online and via phone. All data are weighted by age, sex, education, race/ethnicity, region, and AARP membership to be nationally representative of adults age 50-plus in the U.S.
